InCites Journal Citation Reports® (InCites JCR®)

The JCR is the only journal report of its kind which is both complete and editorially selective; it contains all the data required to understand the components that index the value and impact of each journal as it captures all citations to the journal – including non-article materials such as editorials and policy-relevant comment.

JCR is the only source of citation data on journals, and includes virtually all specialties in the areas of science, technology, and social sciences. JCR offers a systematic, objective means to critically evaluate the world's leading journals, with quantifiable, statistical information based on citation data.

The 2019 release, with 2018 citation data for literature within the sciences and social sciences, features 11,877 journal listings in 236 disciplines; 81 countries are represented. The new release of the JCR also includes 283 new journal titles, and 108 of them fully Open Access.

The 2018 JCR Features:

■ Overview :
